

Monash University: Assessment Cover Sheet

Student name	Fan	Shuangkun	
School/Campus		Student's I.D. number	29849381
Unit name	FIT3179 Data visualisation - S2 2022		
Lecturer's name		Tutor's name	
Assignment name	Data Visualisation I Report	Group Assignment: No Note, each student must attach a coversheet	
Lab/Tute Class:	Lab/Tute Time:	Word Count:	
Due date: 05-09-2022	Submit Date:	Extension granted <input type="checkbox"/>	

If an extension of work is granted, specify date and provide the signature of the lecturer/tutor. Alternatively, attach an email printout or handwritten and signed notice from your lecturer/tutor verifying an extension has been granted.

Extension granted until (date):/...../..... Signature of lecturer/tutor:

Late submissions policy	Days late	Penalty applied
Penalties apply to late submissions and may vary between faculties. Please refer to your faculty's late assessment policy for details.		

Patient/client confidentiality: Where a patient/client case study is undertaken a signed [Consent Form](#) must be obtained.

Intentional plagiarism or collusion amounts to cheating under Part 7 of the Monash University (Council) Regulations

Plagiarism: Plagiarism means to take and use another person's ideas and or manner of expressing them and to pass these off as one's own by failing to give appropriate acknowledgement. This includes material from any source, staff, students or the Internet - published and unpublished works.

Collusion: Collusion means unauthorised collaboration on assessable written, oral or practical work with another person. Where there are reasonable grounds for believing that intentional plagiarism or collusion has occurred, this will be reported to the Associate Dean (Education) or nominee, who may disallow the work concerned by prohibiting assessment or refer the matter to the Faculty Discipline Panel for a hearing.

Student Statement:

- I have read the university's Student Academic Integrity [Policy](#) and [Procedures](#)
- I understand the consequences of engaging in plagiarism and collusion as described in Part 7 of the Monash University (Council) [Regulations](#) (academic misconduct).
- I have taken proper care to safeguard this work and made all reasonable efforts to ensure it could not be copied.
- No part of this assignment has been previously submitted as part of another unit/course.
- I acknowledge and agree that the assessor of this assignment may, for the purposes of assessment, reproduce the assignment and:
 - i. provide it to another member of faculty and any external marker; and/or
 - ii. submit to a text matching/originality checking software; and/or
 - iii. submit it to a text matching/originality checking software which may then retain a copy of the assignment on its database for the purpose of future plagiarism checking.
- I certify that I have not plagiarised the work of others or participated in unauthorised collaboration or otherwise breached the academic integrity requirements in the Student Academic Integrity [Policy](#).

Date: 5/9/2022 Signature:  *

Data Visualization I

Shuangkun Fan

Project URL: [Did the Chinese team do well?](#)

Words count: 964

Project Description

Domain: The domain of this data visualization project is about the performance of the Chinese team in the 2019 FIBA basketball world cup. It mainly includes the analysis of several major statistics of basketball, such as shooting, player height, etc.

Why: The purpose of this data visualization project is to help Chinese basketball fans analyze the strengths and weaknesses of Chinese men's basketball players by visualizing them in a more intuitive way.

Who: The target audience should include all fans of the Chinese men's basketball team and anyone who cares about the performance of the Chinese men's basketball team, which also includes fans of the men's basketball teams of other countries, i.e., the opponents of the Chinese men's basketball team.

What

The main data was obtained from a GitHub repository called **FIBA-Basketball-World-Cup**, which contains data on all countries for the 2019 FIBA Basketball World Cup, including rosters, schedules, game results, and player data. However, for this project I only needed the data of the Chinese team, so I cleaned up the data of each file accordingly and kept only the data of the Chinese players. And also some data is gained from the official FIBA Website.

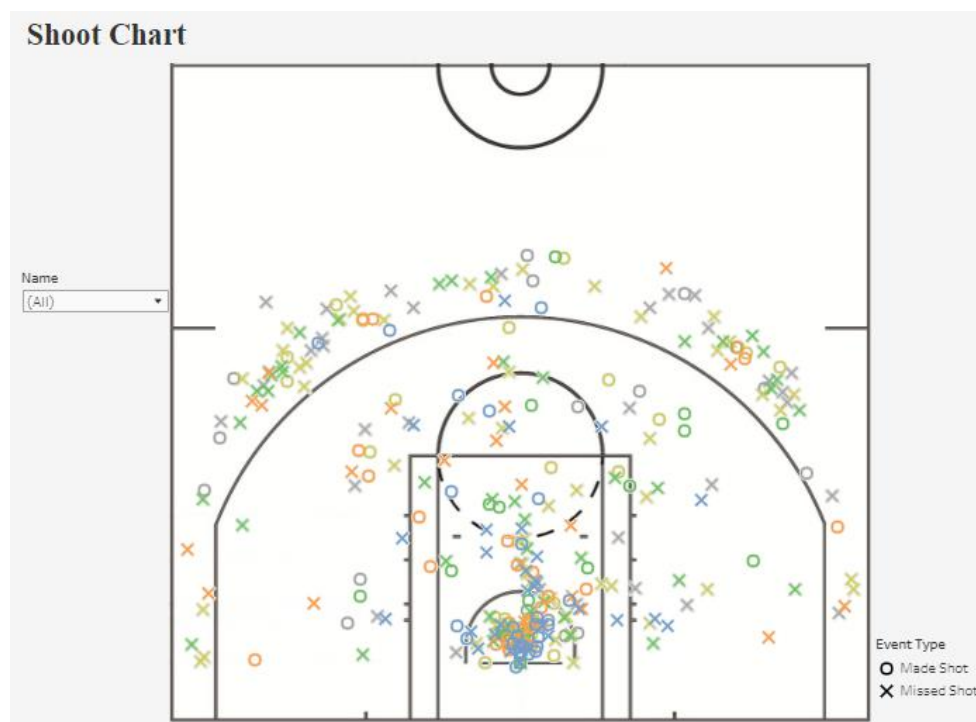

Figure 1 – Shoot Chart

For this shot chart, the data here includes mainly the latitude and longitude of the shot location, which is the numerical continuous data, and the Event Type is categorical data. The X-axis shows the basketball court baseline and the Y-axis shows the basketball's sideline.

Figure 2 - Team leader

Team leader is a chart that lists the most efficient players in each position based on their efficiency ratings. There are three different stats, points, rebounds and assists. They are all numerical continuous data.

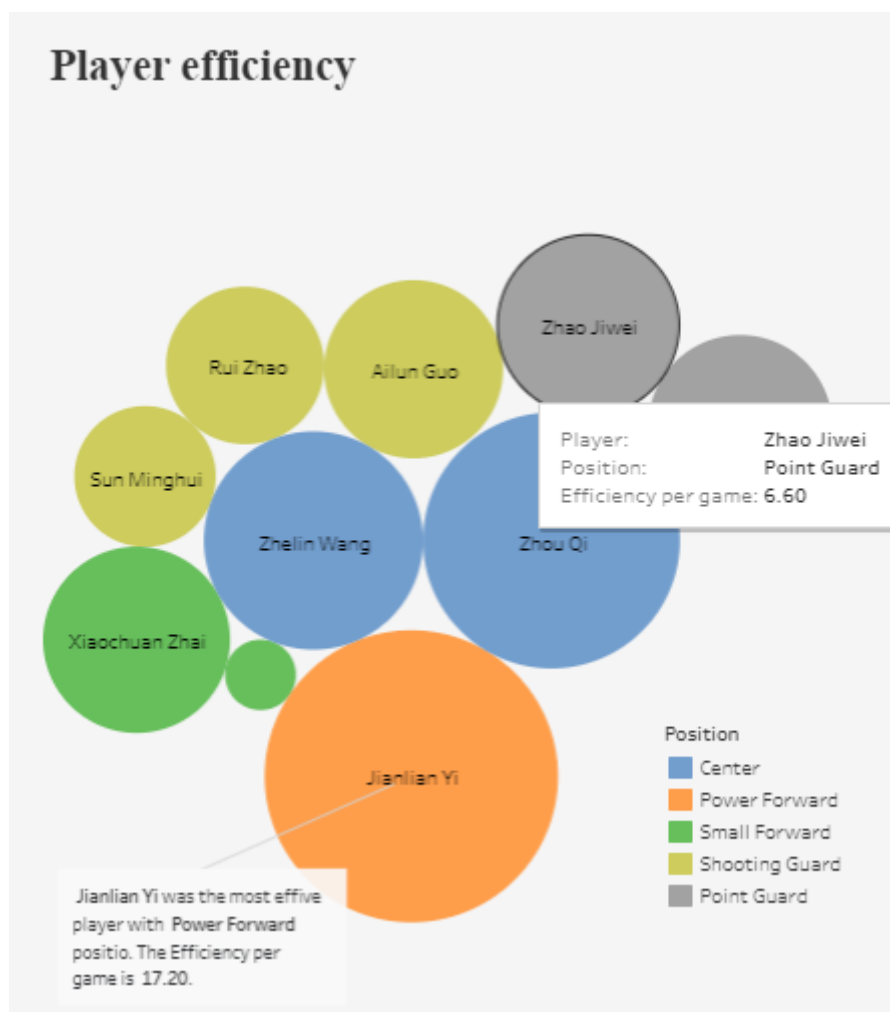

Figure 3 – Player Efficiency

This player efficiency bubble chart shows mainly the efficiency values and positions of all Chinese men's basketball team members, they are numerical continuous data and categorical data respectively.

Figure 4 – Lower Section

These five charts present each of the five important stats of a player: points, rebounds, blocks, assists and the player's height distribution. They are all continuous data.

For the bar chart, the rows show different player (categorical based on their position), and column shows the four different stats respectively. And the histogram shows the player height on X-axis and the count of player on the Y-axis.

Why and How

As mentioned above, this visualization could help Chinese basketball fans analyse the strengths and weaknesses of Chinese men's basketball players by visualizing them in a more intuitive way. It also allows to see an individual player's shot and other performance visually. So we can get a more intuitive look at the stats of the members of the Chinese men's basketball

team from a big picture perspective.

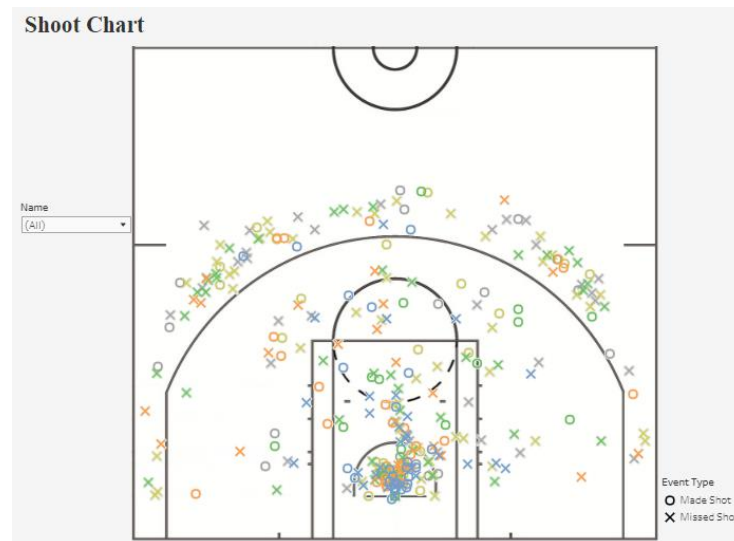

Figure 5

The mark used in the shot chart is the points to indicate the shot location of player for all games. Channels used here are Color Hue and Shape, as there are five different colors are used which indicate the five different positions in the basketball sport including center, power forward, small forward shooting guard and point guard. And also Shape indicates the event type of each shotting, whether it is made or missed.

Figure 6

The mark used in the bubble chart is the circle to indicate a particular player. Channels used here are Color Hue and Size. The larger size means the higher efficiency of a player.

Figure 7

The mark used in this bar chart is the lines to indicate the number of stats for the three different categories. Channels used here are Color Hue and length, as there are three different colours are used which indicate the three types of data, and length indicates the number of points, rebounds and assists.

Figure 8

For those four charts, the mark used in bar chart is the lines to indicate the number of stats for the four different categories. Channels used here are Color Hue and length, as there are five different colours are used which indicate the five different position, and length indicates the number of points, rebounds, blocks and assists.

Figure 9

The mark used in the histogram is the line, and channels used here are length to indicate the number of people in each interval.

Design:

Layout:

The layout of the whole project is very simple, mainly divided into two sections, top and bottom, and two sections, left and right. The top section is for team leader chart and shoot chart and player efficiency. The bottom section is divided into two sections, offensive data against defensive data. The reading order is from top to bottom, and the title of each figure has horizontal and vertical alignment according to the line of sight. And the top, bottom, left and right of the project have a margin of 4 pixels reserved for white space.

Color:

The colors are also very simple: the background of the project is light gray, the title is black and bold, and the team leader image uses the same color as the jersey as the channel. five different locations are also used as channels in five relatively easy to distinguish colors.

Figure-ground:

The different sections are mainly identified by the larger as well as the thicker font titles. For example, the five graphs in the lower section are indicated by the text of the 5 key stats panel.

Typography:

The title font uses Times New Roman, which is a serif font. Because this project is more like a magazine type, and serif is usually used for headings and titles. The font for the body is tableau regular, which is Sans serif, and it is used because it looks clean and clear.

Storytelling:

This visualisation is most likely a Magazine Style story telling genre as it has title on the top and with some explanation for the project.

Appendix:

①

Layout

Filter

Position	▼
Player	▼

Title : shoot chart

Author : SK

Date : 2022/9/24

Sheet : 2

Task : FIBA Data vis

Operations

- The field will contain all ~~teams~~ players shooting statistics.
- Give a overview of player shooting
- user can click filter to filtering the shoot chart.
- click a point to see a particular shoot event.

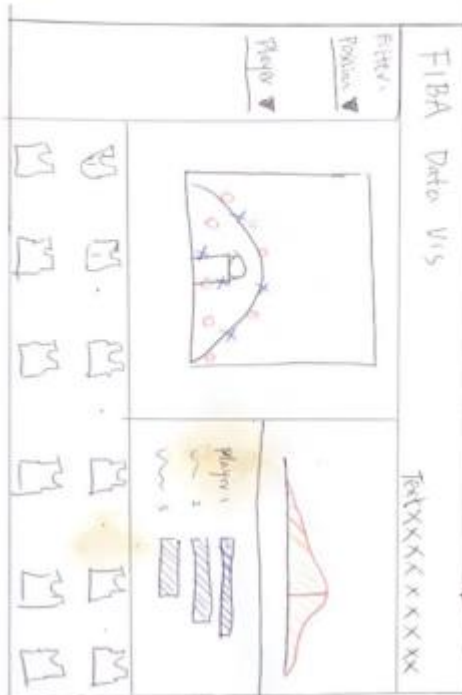

Focus

- user can click/select a particular point to see player, event type (missed/made), shot type, time, quarter.
- user can ~~for~~ filter the chart by selecting a position or a particular player.
- By default, it will show whole team.

Discussion

- * -Ve
- not much interaction & less engagement with users.
- user maybe ~~are~~ overwhelmed if there are many shootings (too much data on the chart).

⑤ Layout

Title: Dashboard view
Author: SK
Date: 2021/9/24
Sheet: 3
Task: FIBA Data Vis

Operation

user can click this drop down menu
to select a particular position / player

user can ~~click~~ click to select a particular
statistic type to see different statistics
in bar chart.

Focus

- on left side, there will be a filter area.

user can apply this criterion to see
the chart.

- there will be 4 main areas
which shows 4 different items.

Discussion

+ve

- clear format, 4 chunk of
chart area

visualisation is keeping minimalist design

- Principle: proper white space

-ve

- The jersey take too much
space?

Layout

select ▼
Age
height ←
weight

Task : FIBA Dashboard V.3
Author : SK
Date : 2022/8/24
Sheet : 4
Title : Distribution chart

Operation

- user can click drop down menu on the filter area which is shown on the left side of dashboard to apply any criteria.

Focus

- It show different type of distribution for player, eg. height, ~~Age~~ weight.
- Also, median is shown, also people to identify the skewness of distribution whether it is symmetrical, positive skewed or negatively skewed.

Discussion

-ve

- less interactive, user maybe feel boring

or

+ve

- Give user a lot of choice to see different distribution
- hard to know a particular player's data at a time.

Sheet 5: Realisation Design

Layout

A

Distribution

Field

bar chart

Focus

- Select color palette which is consistent with team China (Yellow / Red)
- Minimalist Design / white space colour encoding
- Avoid stereotype
- target Audience
